### Monoclonal Antibody to Phosphotyrosine (incl. pos. control) - Purified

**Catalog No.:** AM00123PU-N  
**Quantity:** 0.1 mg  
**Background:** Phosphorylation and dephosphorylation of cellular proteins are central steps in transducing extracellular signals to the cell nucleus. Phosphorylated epitopes may serve as docking sites for the assembly of protein complexes or may alter the 3-dimensional protein structure thus modulating enzymatic activity or the ability to undergo protein-protein-interactions. Modification of proteins on tyrosine residues is mediated by protein tyrosine kinases. Tyrosine phosphorylation may alter the biological activity or mediate the assembly of protein complexes via interaction of phosphotyrosine residues with SH2 or PID domains.  
**Host / Isotype:** Mouse / IgG1  
**Clone:** 2A5  
**Immunogen:** Synthetic phosphopeptide conjugated to KLH  
**Epitope:** E-pY-M...  
**Format:**  
**State:** Lyophilized purified IgG fraction.  
**Purification:** Subsequent Thiophilic Adsorption and Size Exclusion Chromatography.  
**Buffer System:** 1 ml 2 x PBS with 0.09% Sodium Azide/PEG and Sucrose.  
**Reconstitution:** Restore with 1 ml H2O (15 min, RT).  
**Applications:**  
**ELISA:** Use at 0.1 µg/ml.  
**Immunoblotting:** 0.5 µg/ml for HRPO/ECL detection.  
*Recommended blocking buffer:* Casein/Tween 20 based blocking and blot incubation buffer AS00002BU-N or AS00002BU-L.  
**Immunoprecipitation:** Use at 1-10 µg per 10e6 pervanadate-treated A431 cells.  
*Included Positive Control:* Phosphotyrosine MW standard.  
Other applications not tested. Optimal dilutions are dependent on conditions and should be determined by the user.  
**Specificity:** This monoclonal antibody (2A5) recognizes a broad spectrum of Tyrosine phosphorylated proteins in crude cell extracts. It tolerates a negative charge N-terminal to the Phosphotyrosine residue.  
**Species:** Human, Mouse, Rat and Canine (Dog). Other species not tested.
Storage: Store lyophilized (preferably in a desiccator) at -20°C and reconstituted (aliquote and freeze in liquid nitrogen) at -80°C. Avoid repeated freezing and thawing. Thaw aliquots at 37°C. Thawed aliquots may be stored at 4°C up to 3 months. Shelf life: one year from despatch.

Pictures: Phosphotyrosine Detection: Lysates of pervanadate-treated A431 cells were probed with Lane 1: mab 2A5 (IgG), 1μg/ml
Lane 2: mab 2C8 (IgG), 1μg/ml
Lane 3: mab 3B12 (IgG), 1μg/ml
Lane 4: mab 9H8 (IgG), 1μg/ml
Lane 5: mab 16F4 (IgG), 1μg/ml
Lane 6: mab 9F1 (IgG), 1μg/ml
