Laboratory Procedures

For long term storage, we suggest that ceftazidime (hydrate) be stored as supplied at -20°C . It should be stable for at least two years.

Ceftazidime (hydrate) is supplied as a crystalline solid. Ceftazidime (hydrate) is sparingly soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide. For biological experiments, we suggest that organic solvent-free aqueous solutions of ceftazidime (hydrate) be prepared by directly dissolving the crystalline compound in aqueous buffers. The solubility of ceftazidime (hydrate) in PBS, pH 7.2, is approximately 5 mg/ml. We do not recommend storing the aqueous solution for more than one day.

Ceftazidime is a broad-spectrum β -lactam antibiotic used for parenteral administration.¹ It is a cephalosporin antibiotic that works by stopping the growth of bacteria.¹ It is used in many types of bacterial infections.¹⁻³
