

***O*-GlcNAcase contents**

Catalog #	Description	Size	M. W.	Purity	pH	Storage
GE0401-1KU	<i>O</i> -GlcNAcase	1,000 units, lyophilized	52,000	> 95%	7.5 optimal	-20°C, up to 6 months
BA0801	10X Reaction Buffer	1 mL			7.5	4 to 25°C

This product is for research use only and not for resale or for any use in the manufacture of a therapeutic or for any diagnostic purpose.

Product description: This product is a recombinant *O*-GlcNAcase or OGA (glycosyl hydrolase family GH84; EC 3.2.1.169), cloned from *Oceanicola granulosus* and expressed in *Escherichia coli*. It releases *O*-linked β -*N*-Acetylglucosamine (GlcNAc) from serine and threonine residues of glycoproteins and glycopeptides.

This product does not contain any detectable activities of proteases, exo- β -*N*-Acetylglucosaminidase or other glycosidases.

Unit definition: One unit is defined as the amount of *O*-GlcNAcase required to catalyze the release of 1 nmole *p*-nitrophenol (pNP) from *p*-nitrophenyl-*N*-acetyl- β -D-glucosaminide (pNP-GlcNAc) per min at 37°C in 100 μ L 1X Reaction Buffer (50 mM Tris, 100 mM NaCl, pH 7.5).

Product reconstitution: Dissolve the lyophilized product in 100 μ L of molecular grade water to make a 10,000 units/mL (Cat #GE0401-1KU) in 1X Reaction Buffer. Once reconstituted, store the enzyme at 4°C for up to 5 days or at -20°C for up to 3 months. Aliquoting is recommended to avoid repeated freeze-thaw cycles.

Activity assay: One unit of enzyme is added to 100 μ L of 500 μ M pNP-GlcNAc in 1X Reaction Buffer (Cat #BA0801) at 37°C, followed by real-time measurements of absorption at 405 nm every 5 s for 90 s.
