Q-Analyzer Software for QAM-INT-2

Q-Analyzer Software for use with Quantibody® Mouse Interleukin Array 2, multiplex ELISA array Kit for quantitative measurement of 10 Mouse Cytokines simultaneously

CODE: QAM-INT-2-SW

Q-Analyzer

The Q-Analyzer®, a software tool created specifically for the Quantibody array, will plot the standard curve for each analyte in addition to performing background subtraction/normalization. After imaging the slide with a laser scanner and extracting the densitometry values, protein quantification can be performed with virtually any ELISA analysis software. However, our array-specific Q-Analyzer® tool facilitates the process. Instead of tedious calculation of each analyte, the user can rapidly plot all the standard curves simultaneously in both linear regression and log-log models. The program removes outlier spots for greater accuracy, and then outputs the unknown sample concentrations automatically.

Highlights

- Automatically analyzes antibody array data
- Generates graphs for easy visual comparison
- Excel-based software
- Fast and Easy to use - ?Copy and Paste?
- Q-Analyzer® plots standard curves in both linear regression and log-log models.

The products are furnished for LABORATORY RESEARCH USE ONLY. Not for diagnostic or therapeutic use.
