Haematologic Technologies
INCORPORATED

Purified Proteins

Over 150 highly purified and well-characterized native plasma and tissue proteins

- Human, Bovine and Murine clotting factors and other plasma proteins
- Protease inhibitors and fluorogenic substrates
- Purity and quality guaranteed
- OEM and custom purification services

Coagulation Proteins

Haematologic Technologies, Inc. is a primary manufacturer that specializes in the isolation and characterization of high quality, plasma proteins which are intended for in vitro research use. Emphasis is placed on proteins involved in the regulation of blood coagulation and fibrinolysis, as well as the regulation of bone metabolism. Our product line consists of over 150 highly purified and well-characterized native proteins including zymogens, enzymes, cofactors, and inhibitors. These proteins are available from human, bovine and murine source plasma. Proteins from other species are available upon request.

Substrates and Inhibitors

HTI offers a complete line of ANSN-based substrates, which are useful for monitoring the enzyme activity of various serine proteases. Additionally, HTI offers tri-peptide chloromethylketones to irreversibly inhibit these proteases. Various other plasma and non-plasma inhibitors are also available.

Custom Purification & Modification

Many researchers require plasma proteins that do not appear in our catalog or from the plasma of alternate species. Additionally, some may require a modification of products that we do offer: such as buffer reformulation or conjugation. Haematologic Technologies has the ability to meet those needs, and will work with you to provide the protein you require – fully characterized to your specifications.

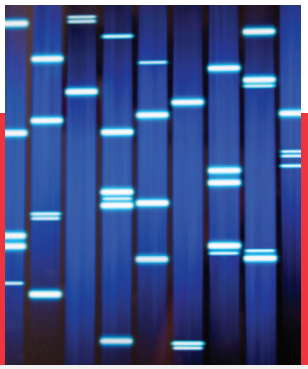

IVD and Point-of-Care Reagents

Customized reagents for IVDs and POC devices, such as antibodies for ELISAs and on-board control chemistries for hand-held coagulation monitoring devices, are available. As an ISO 9001 company we can offer dedicated, quality resources to your project as well as over 30 years of blood coagulation experience to help you get your product on the market. We can consult with you on the appropriate design of your assay or device, discuss reagent and control options, manufacture pilot batches for validation, and offer continual manufacturing support throughout the life of your product.

Purified Proteins

Better quality = Better Results

>95% pure, fully functional and guaranteed.* Multi-species, active site-blocked, and conjugated versions available. Custom purification available upon request.

Factor VII & VIIa	RVVV/RVVX/E. Carinatus	TAF	Thrombospondin
Factor IX & IXa	Factor V & Va	Angiostatin	Vitronectin
Factor X & Xa	Fibronectin	Alpha-2-antiplasmin	R. Tissue Factor
Factor XI & XIa	Protein S	Protein Z	Bovine Lactadherin
Factor XII	Thrombomodulin	Fibrinogen	Osteocalcin
Factor XIII & XIIIa	vWF & vWF VIII-free	Beta-2-glycoprotein 1	Phospholipids
Plasminogen & Plasmin	Heparin Cofactor II	Osteonectin	Fluorogenic substrates
Protein C & aPC	Antithrombin III	Platelet factor 4	CMK-protease inhibitors
Prothrombin & Thrombin	Corn Trypsin Inhibitor**	Beta-thromboglobulin	DAPA

* Up to the expiration data on the product data sheet

** CTI blood collection tubes available

haemtech.com

Haematologic Technologies, Inc. (HTI), an ISO 9001:2015 registered company, is a primary manufacturer that specializes in the isolation and characterization of high quality plasma proteins, which are intended for in vitro research use. HTI is focused on proteins involved in the regulation of blood coagulation as well as the regulation of bone metabolism. The HTI product line consists of over 150 highly purified and well-characterized proteins including zymogens, enzymes, cofactors, and inhibitors as well as a complementary line of monoclonal and polyclonal antibodies. Also available are factor deficient plasmas and customized blood collection tubes made-to-order for clinical research. Services available include custom protein purification, protein modification, assay development, contract manufacturing, and contract research.
